Tableau Data Storytelling Specification & Narrative Design

Global Olympic Performance & Regional Efficiency Story

Date: 24 September 2026	**Team ID:** PNT2026TMID092418
Project Name: Global Olympic Sports Performance Analysis	**Maximum Marks:** 5 Marks

Tableau Storytelling Architecture

In Tableau, a Story is a sequence of visualizations and text points that present data insights in a narrative-driven way. This story guides stakeholders (NOC strategists, grant analysts, media storytellers) through a logical progression of historical Olympic analysis from 1992 to 2026.

Key Observations & Sequential Story Points

Story Point 1: Per-Athlete Medal Yield Analysis

Rowing and Shooting Lead Per-Athlete Medal Yield: Rowing achieves 6.916 average medals per athlete, while Shooting achieves 6.731. This provides evidence for NOC Strategists (Ms. Priya) to allocate resources toward high-density sport categories rather than low-yield disciplines.

Story Point 2: Global Powerhouses Benchmark

United States and China Dominate Overall Medal Tallies: Cumulative totals show the United States at 735 medals and China at 696 medals, establishing the global competitive benchmark across modern Olympic Games.

Story Point 3: Capital Efficiency & Overperforming Nations

South America Leads Regional Efficiency at 49.64%: The Global Sports Investment vs. Medal Performance bubble chart highlights that South America leads regional efficiency, with nations like Slovakia, Georgia, and Ethiopia delivering disproportionately high medal returns relative to smaller budgets.

Story Point 4: Host Nation Dominance & Multi-Decade Expansion

Japan Leads Host Advantage (105 Medals) & Medal Totals Fluctuate: Home host advantage yields strong results (Japan: 105, USA: 100, China: 93), while historical medal totals swing from a low of 305 in 2000 to a peak of 363 in 2020, and 334 in 2026.
